

Flerovium

Post Transition Metal

Symbol

Fl

Atomic number

114

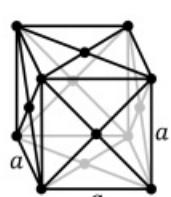

Atomic weight (amu)

289

Phase - Solid

Crystal Structure

Face Centered Cubic

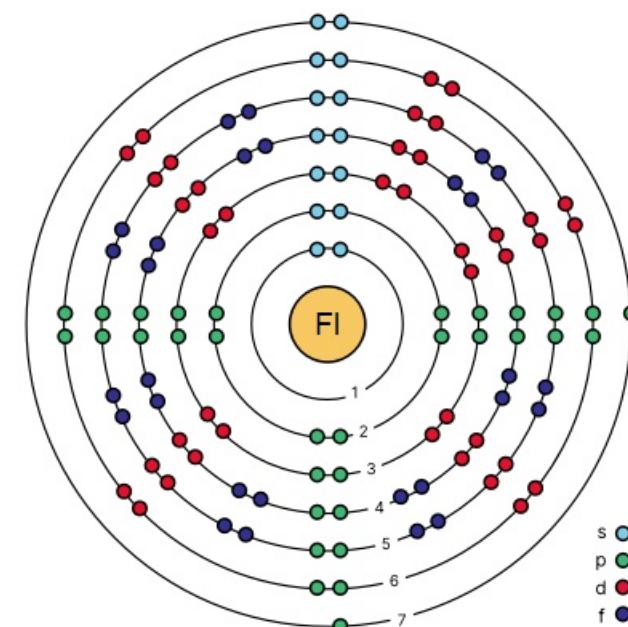

History

The element Flerovium was discovered by Yuri Oganessian et al.(JINRinDubna) in year 2004 in Russia .

Flerovium was first isolated by in . Flerovium derived its name from Flerov Laboratory of Nuclear

Reactions, part of JINR where the element was synthesized; itself named for Georgy Flyorov, physicist.
