

Rhenium

Transition Metal

Symbol Atomic number

Re **75**

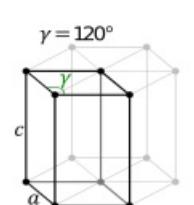

Atomic radius (pm) Melting Point (K)

188 **3459**

Phase - Solid

Crystal Structure

Simple Hexagonal

Atomic weight (amu)

186.20

Boiling Point (K)

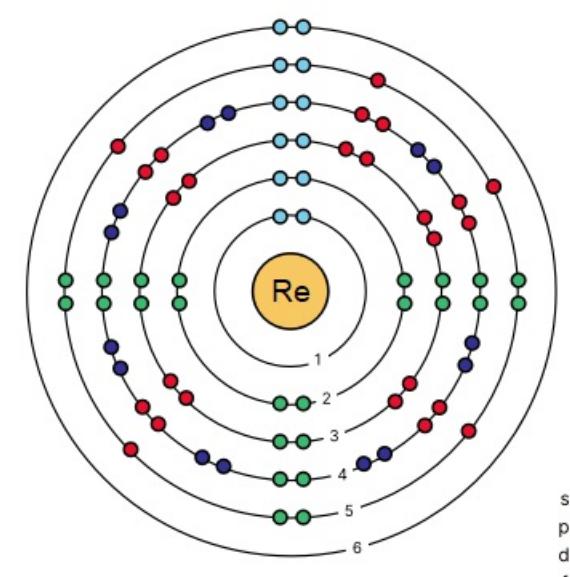

5869

History

The element Rhenium was discovered by M. Ogawa in year 1908 in Germany . Rhenium was first isolated by M. Ogawa in 1919 . Rhenium derived its name from Rhenus, the Latin name for the river Rhine.

Appearance

silvery-grayish
