

Rhodium

Transition Metal

Symbol

Rh

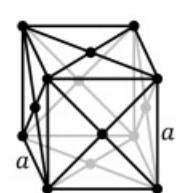

Atomic radius (pm)

173

Phase - Solid

Crystal Structure

Face Centered Cubic

Atomic number

45

Melting Point (K)

2237

History

The element Rhodium was discovered by H. Wollaston in year 1804 in United Kingdom . Rhodium was first isolated by H. Wollaston in 1804 . Rhodium derived its name from the Greek rhodos, meaning 'rose coloured'.

Appearance

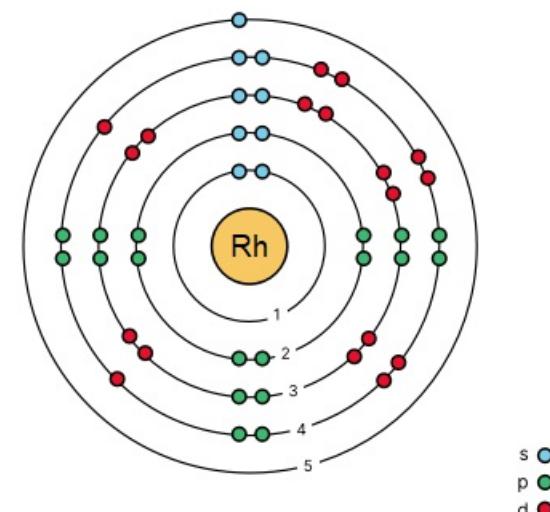

silvery white metallic

Atomic weight (amu)

102.90

Boiling Point (K)

3968

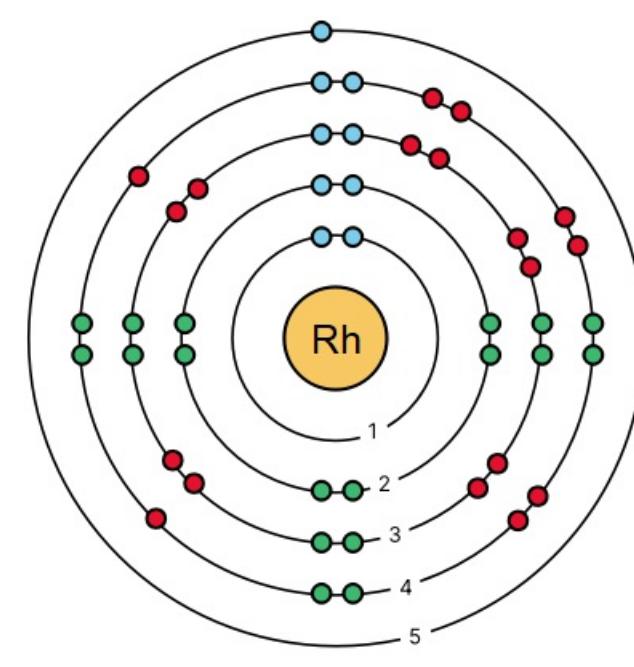

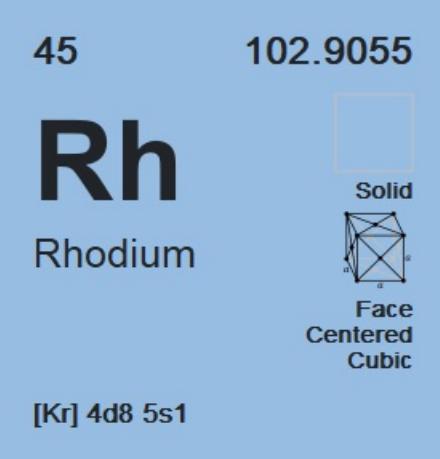

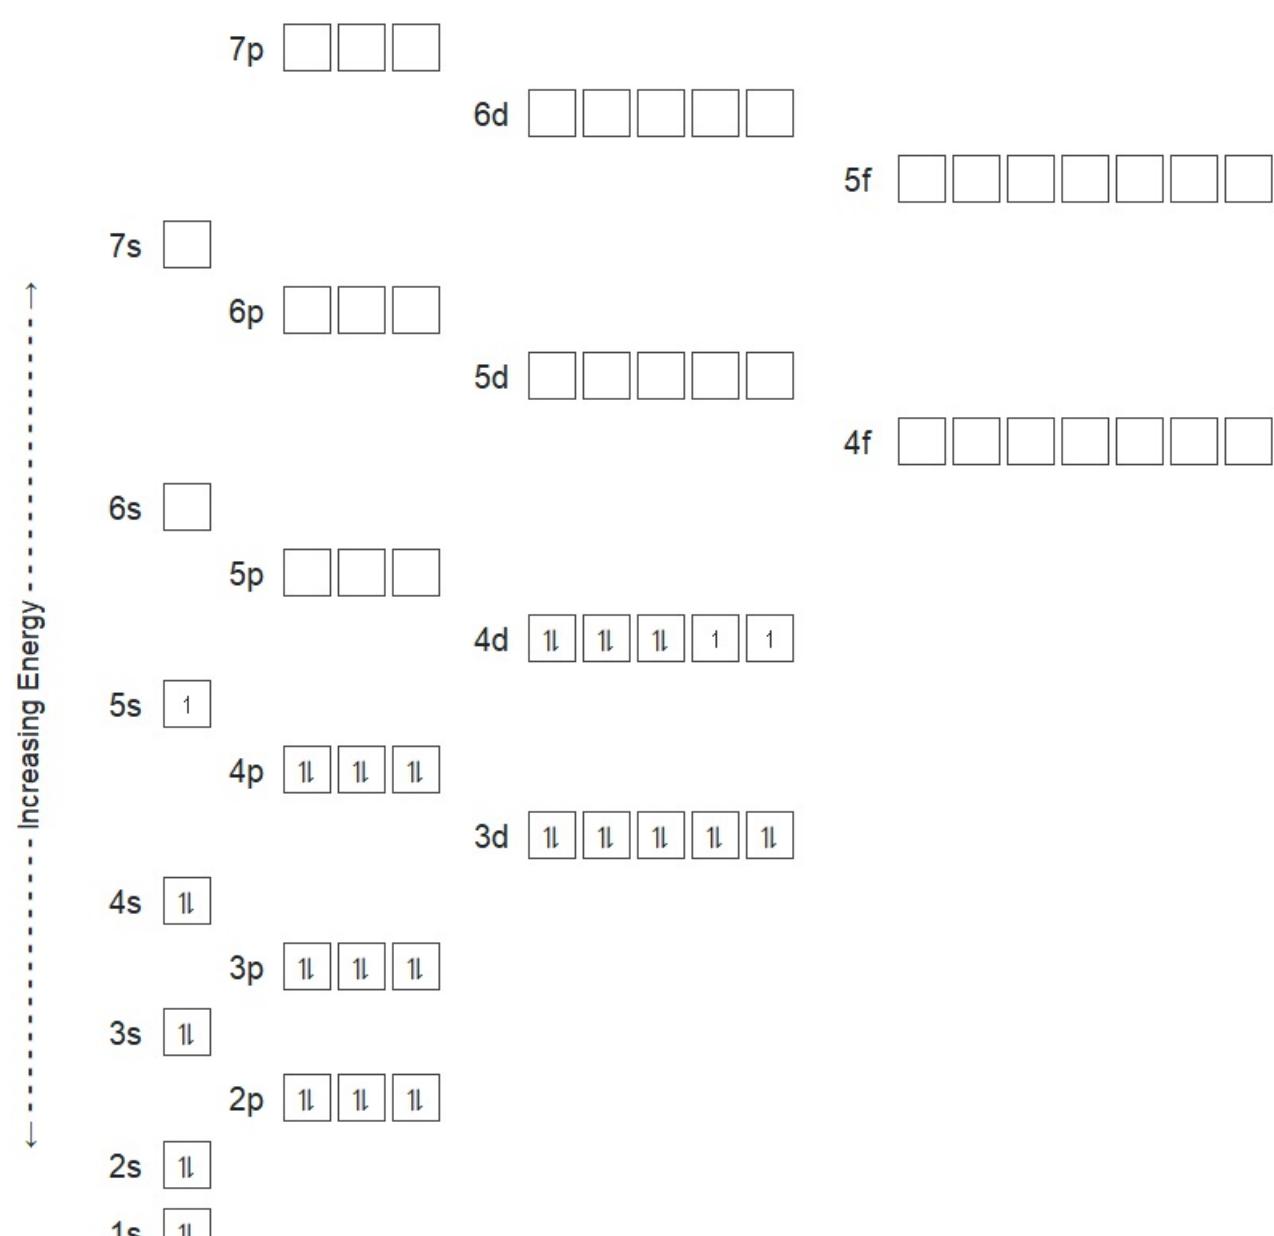

[Kr] 4d8 5s1
[2, 8, 18, 16, 1]
