

# Tellurium

Metalloid

Symbol                      Atomic number

**Te**                      **52**

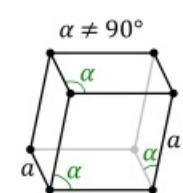

Atomic radius (pm)                      Melting Point (K)

**123**                      **722.66**

Phase - Solid                      History

Crystal Structure

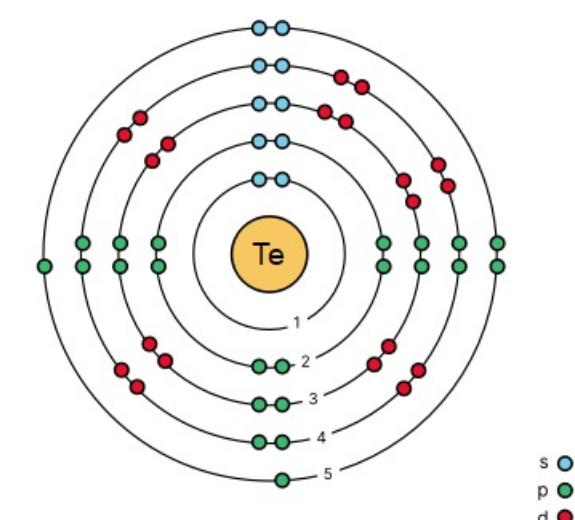

Simple Trigonal

Atomic weight (amu)

**127.6**

Boiling Point (K)

**1261**

[Kr] 4d10 5s2 5p4  
[2, 8, 18, 18, 6]
